WOULD YOU LIKE
AN **INTELLIGENT**
WOOD-BURNING STOVE?

CLEAN COMBUSTION WITH

YOUR ADVANTAGES

HWAM® SmartControl™ is an electronic air control system developed* to help you achieve the cleanest possible combustion. An optimal and clean combustion requires the right amount of wood and air, as well as the right temperature. This is very difficult to achieve manually. HWAM® SmartControl™ controls the process for you, whereby you automatically achieve the best possible combustion every time.

When your wood-burning stove achieves clean combustion, you get the most out of your wood. You set the desired room temperature on your smartphone, thereby minimizing overheating. When your wood-burning stove is not in use, the air supply is closed preventing the hot air in the room to be lost in the chimney.

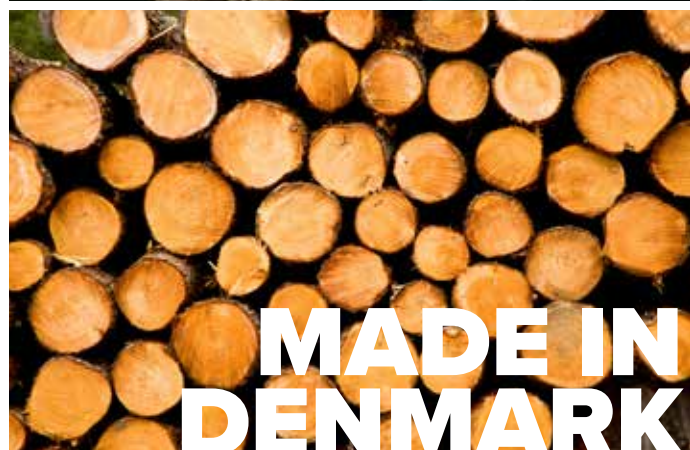

Light the fire as usual - without having to control the air supply yourself, as HWAM® SmartControl™ helps you all the way. If you want to change the room temperature, you simply adjust it via your smartphone. When it is time to restoke, you will receive a notification. It does not get any easier than this.

SAVE UP TO 50%^{}**
on your fuel consumption with
HWAM® SmartControl™

* in collaboration with DTU (Denmarks Technical University)
** Compared to a HWAM wood-burning stove without HWAM® SmartControl™

1

Light the fire as usual

2

Set the desired room temperature on your smartphone

3

Receive a notification when it is time to restoke
